

ASSUMPTIONS FOR PART 1 BY CCID: LATYSHEV

1. Each bot must have one owner and only users can own bots. Bot cannot exist without an owner.
2. Each favourite list belongs to a single corresponding user. No sharing of favourite lists allowed.
3. Only people (users) can Tweet, respond to Tweets and Retweet Tweets. Bots cannot do any of that.
4. Some extra attributes in the form of id's were added for the sake of easier facilitation of the information in the database.
5. Tweets cannot be written/exist without an author (user).

The potential limitations of this model would be that bots do not do much on the platform.
